~ VISION ~

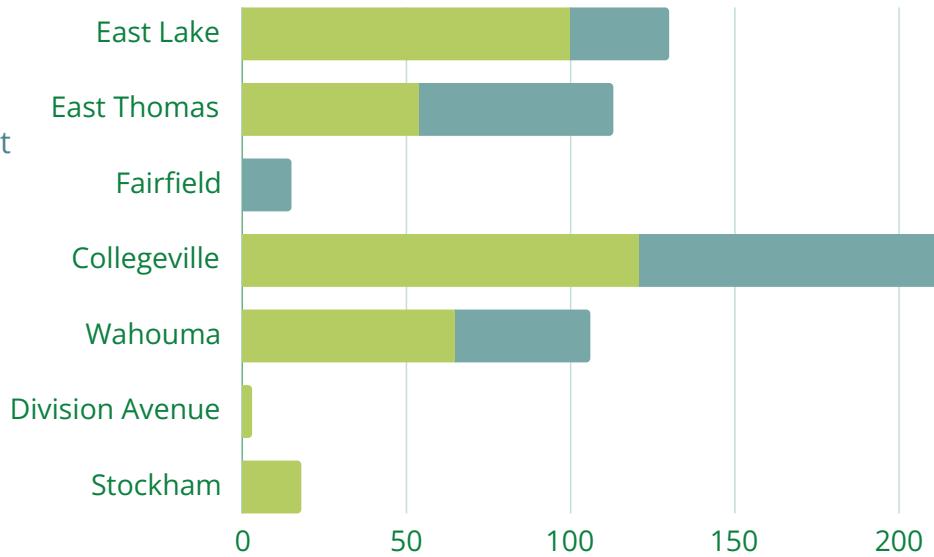

Planting trees to mitigate the negative effects of urban heat islands, stormwater runoff, and air pollution to uplift the community, economy, and health of Jefferson County, Alabama.

This year's impact could not have been made without collaboration from our local government, neighborhood associations, local businesses, and other non-profits and community organizations.

TREES PLANTED BY NEIGHBORHOOD & SIZE

■ Small trees planted by volunteers
■ 1-2 inch caliper trees planted

Our trees vary in size, shape, and most importantly species. Plant biodiversity encourages overall health and long-term survival. Cool Green Trees maintains a 3-year commitment to our project sites to ensure healthy future forests.
